

StitchFlow

Secure, Human-in-the-Loop Decision Support for Compliance & Operations

Instant Analysis

Screen contracts, T&Cs, and forms in seconds

Risk Surfacing

Flags risks, contradictions, and missing info

Zero Autonomy

Humans retain full control before anything is final

The Bottleneck of Unstructured Data

Today's teams are buried in manual document review — and current AI tools don't help enough.

Compliance Officers

Drowning in manual contract reading. They need **quoted evidence**, not vague summaries.

Ops Managers

Need structured entities — dates, obligations — extracted into workflows, not unformatted chat output.

Event Planners

Waste time cross-referencing past precedents every time a new draft arrives.

Coordinators

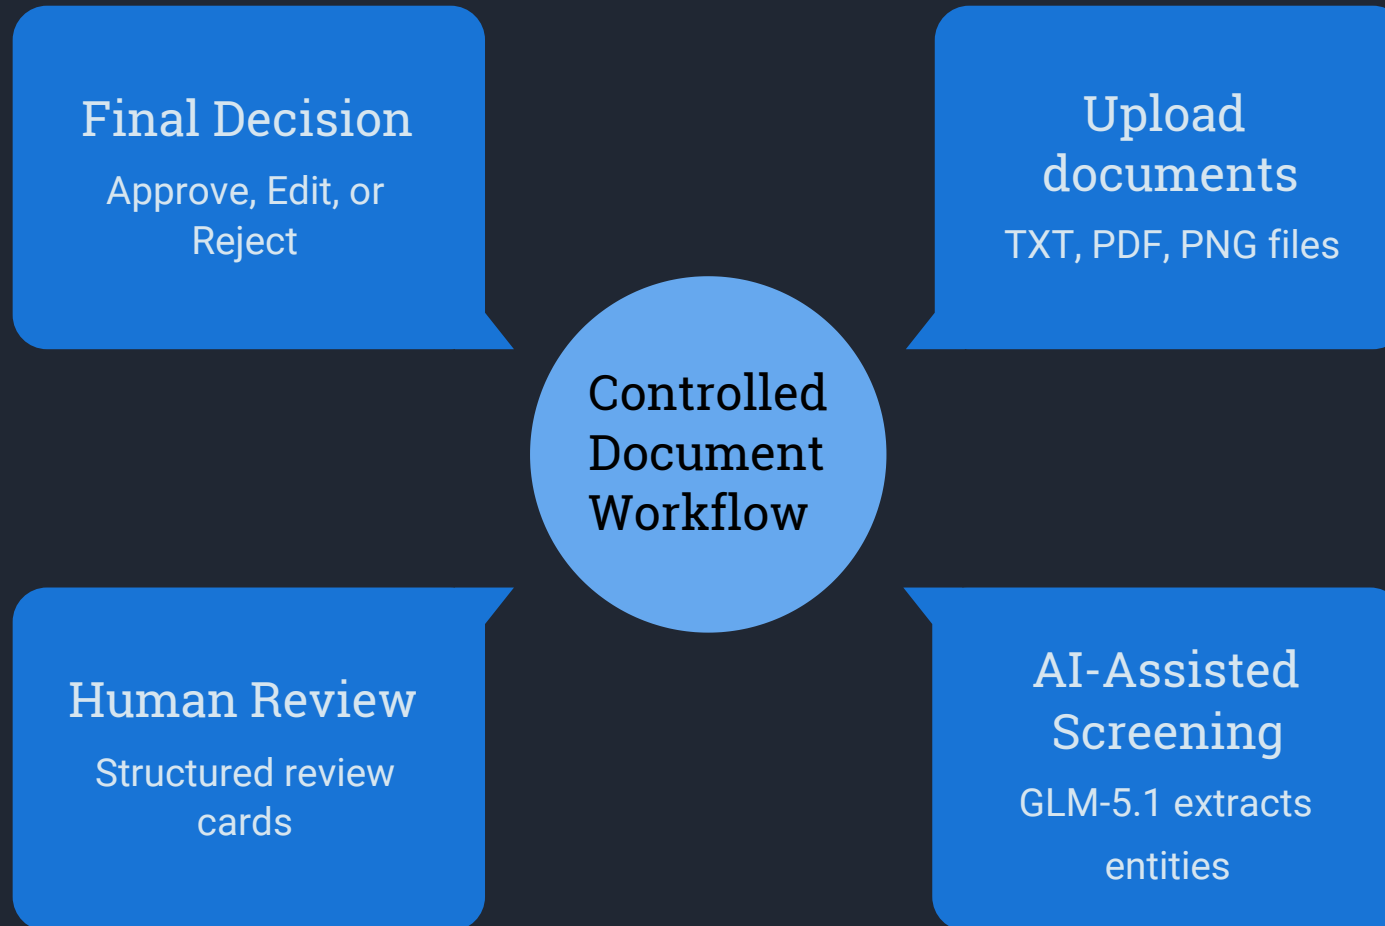

Fear missing hidden clauses or contradictions before a document reaches execution?

⚠️ Current AI tools either act autonomously (risky) or produce unstructured text that isn't actionable.

Upload Once, Screen, Control

StitchFlow transforms raw documents into structured, reviewable insights—without removing the human from the decision.

The AI does the heavy lifting — entity extraction, risk flagging, contradiction detection — but the final decision always belongs to the reviewer.

Tailored for Every Stakeholder

Ops Manager

Gets structured workflow items such as "*Review Payment Terms*" for systematic approvals.

Event Planner

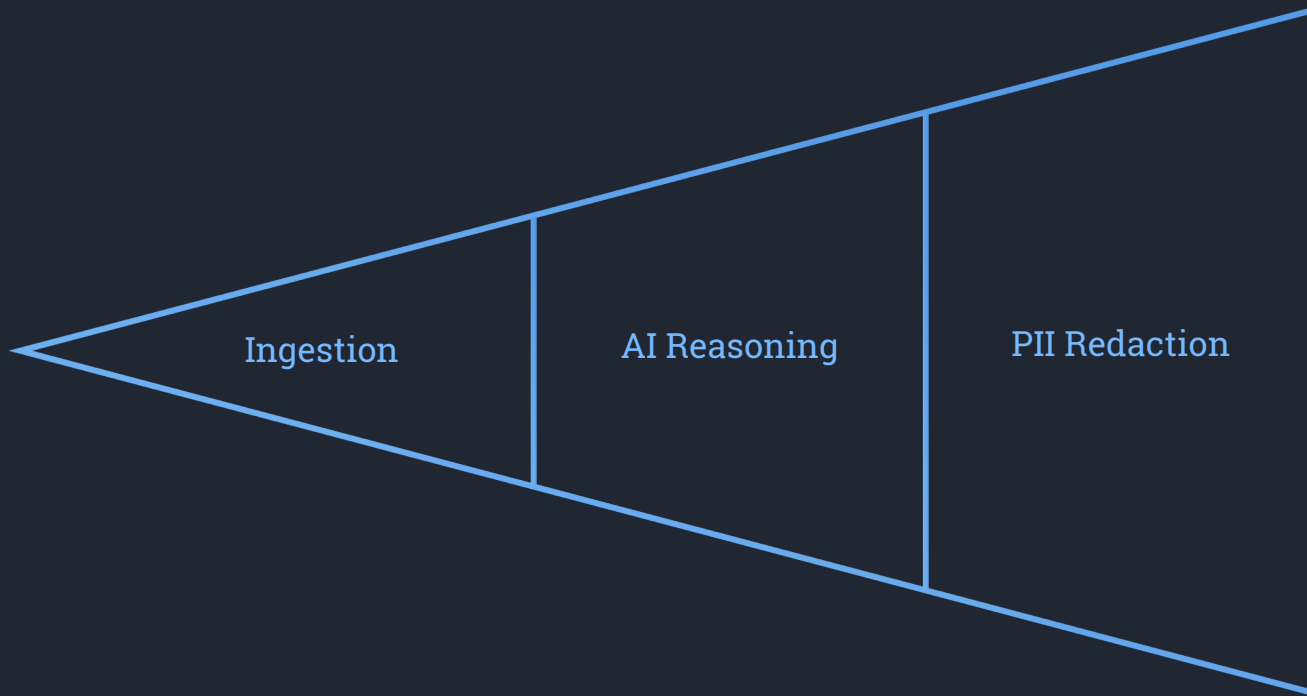

Drafts with precedent-safe clauses clearly separated from high-risk ones.

Coordinator

Can add custom prompts and surface missing fields **before** execution begins.

Redaction-First, Privacy-First

The Security Promise

GLM-5.1 **never sees raw PII**. All sensitive identifiers — emails, phone numbers, ID references — are masked before any text leaves your environment.

Users can safely upload ID screenshots and personal contracts without risk of data leakage.

- ✓ PII redaction occurs at the pre-processing layer — upstream of the AI model — by design.

From Analysis to Action

StitchFlow's MVP delivers structured, actionable outputs — not raw AI text.

Structured Review Engine

AI output rendered as policy-flag cards and clause-level annotations — no free-text walls.

T&C Comparison UI

Green = Safe precedent · **Blue** = AI suggestion · **Red** = Legal review required.

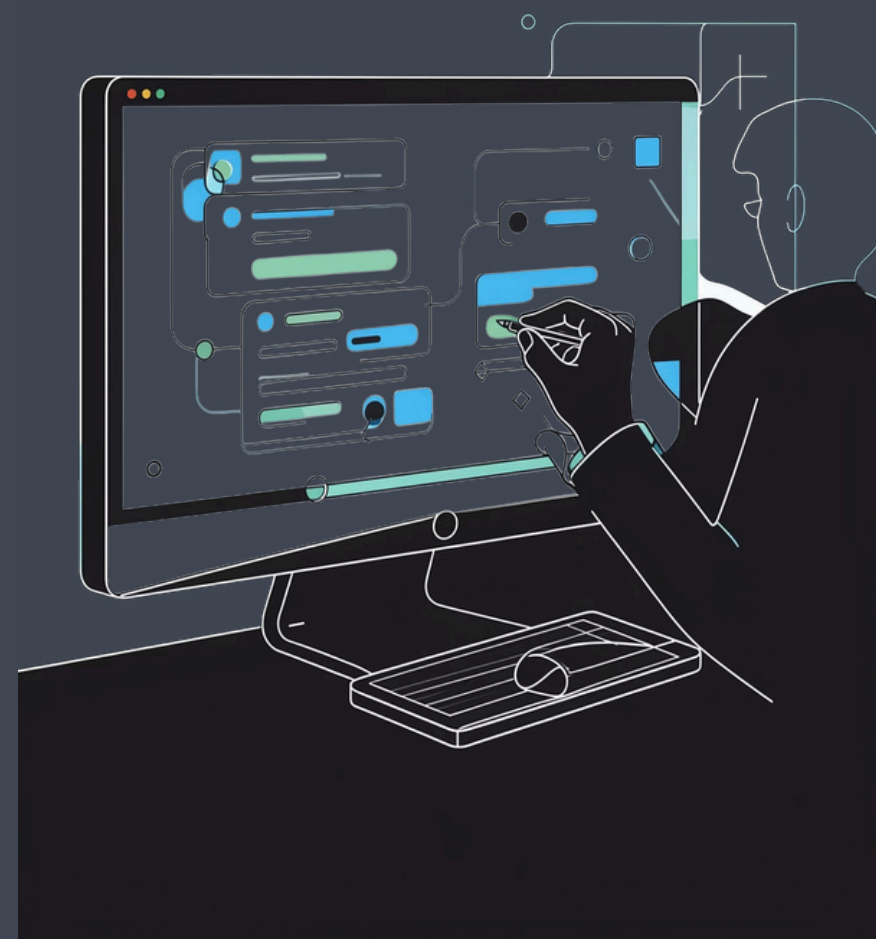

Manual Prompt Editing

Refine AI analysis post-screening — e.g., *"Focus only on payment clauses."*

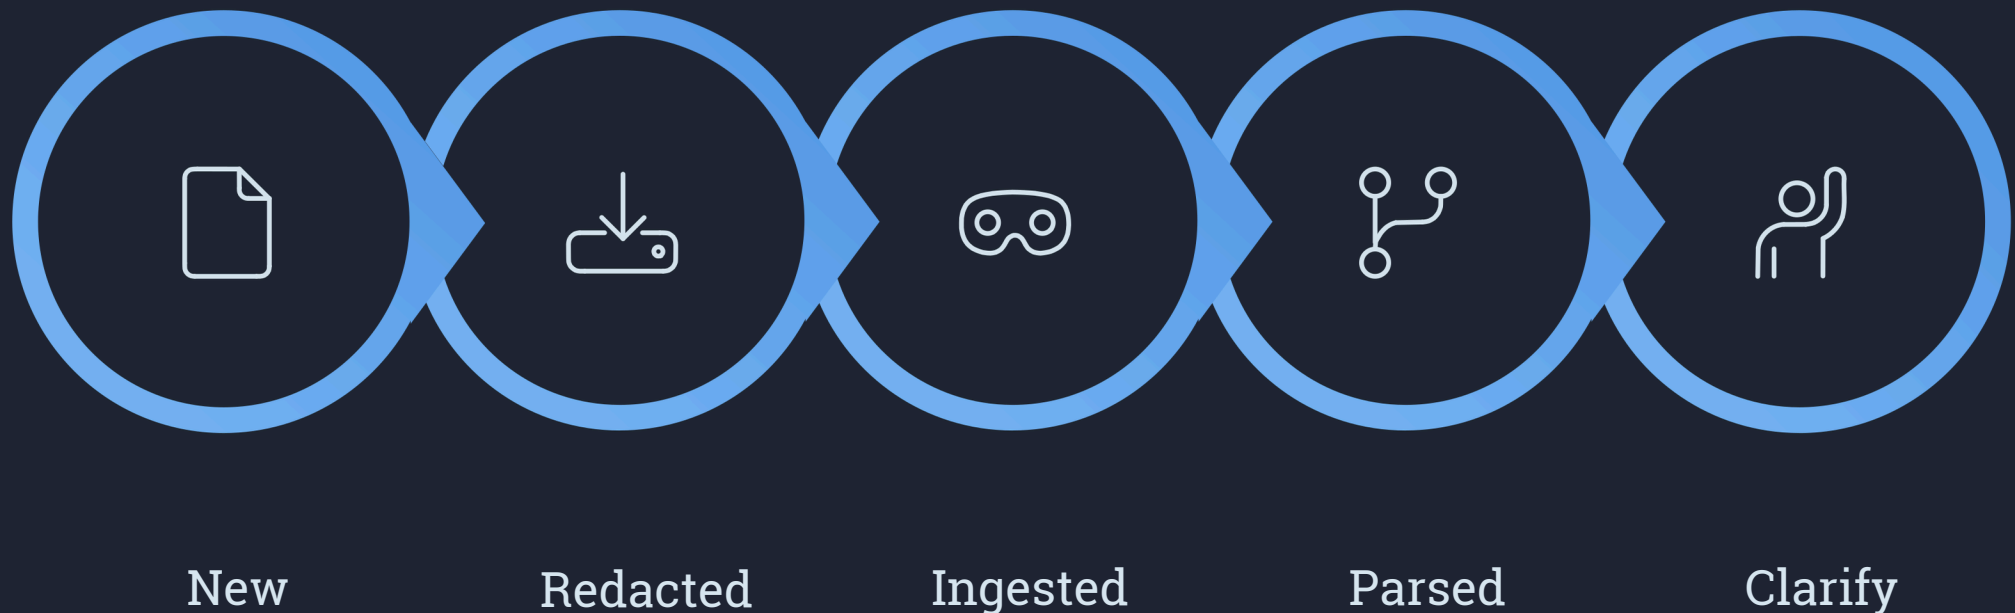

Multi-Step Reasoning

Classify → Extract → Detect Ambiguity → Reconcile Contradictions → Policy Screen.

Rigorous State Management

Every document passes through a governed lifecycle. No document can reach **Approved** status unless all policy review flags have been resolved by a human.

- Final GLM-5.1 reasoning tasks are only triggered after system context is merged with manual user clarifications — ensuring AI output is always grounded in reviewed inputs.

Proven Reliability

Test Case	Document	Result
Redaction / PII Masking	sample_pii.pdf	100% Pass
Policy Screening	sample_policy_violation.pdf	Pass
Contradiction Detection	sample_conflicting_dates.pdf	Pass
Clean T&C Flow	sample_clean_tnc.pdf	Pass

85%

Overall Pass Rate
Across all end-to-end test scenarios

100%

Critical redaction & PII masking tests

Phase 2 & Beyond

The current MVP validates the reasoning engine. Phase 2 connects trusted outputs to the tools teams already use.

Gmail API

Auto-draft emails from approved AI recommendations, ready for human send.

Google Sheets API

Auto-populate ops-tracking rows from structured document outputs.

ERP Systems

Direct task creation from approved workflow items.

Advanced Security (Planned)

- Custom PII redaction rules per department — e.g., stricter masking for finance teams

-

📄 Phase 2 integrations activate only once GLM-5.1 reasoning meets trust thresholds defined by each organisation.

The Principle Behind StitchFlow

AI should do the heavy lifting. The final signature must always remain human.

Upload & Screen

Instant analysis of unstructured documents with zero manual triage

Review & Refine

Structured, evidence-backed
cards that reviewers can trust
and edit

Decide & Approve

Full human control at every transition – from ingestion to approval
